Priima 4.9 Release Notes

We are updating Priima to version 4.9 on Wednesday, June 12th, 2024, at 6:00 PM EEST.

Content of the update:

- Customizing the Appearance and Order of Login Page Buttons
- Creating Reports Without Learning Data
- Change to Learning Path: Learner Receives Completion for the Path When All Required Courses Are Completed
- Other Improvements and Bug Fixes
- Priima Support Services

Customizing the Appearance and Order of Login Page Buttons

The environment administrator can now customize the appearance and order of the login page buttons in the Administration > Login > Login Page Settings view. From now on, it is possible to arrange the login buttons, for example, so that the login button for the largest user group is placed at the top and highlighted with a specific background color and text color.

The default settings for the buttons are as follows:

- Button for logging in with a username and password: environment's primary color and white text
- Single sign-on button (if in use): environment's primary color and white text
- Registration form button (if a form is configured for the environment and the button is shown on the login page): environment's highlight color and black text

Now the background and text color of all buttons can be changed using RGB, HSL, and HEX codes, chosen from a color palette, or selected with a color picker from an image or view open on the user's device.

Buttons can be dragged into the desired order. If new registration forms are created in the environment and their buttons are shown on the login page, by default, this button is placed at the bottom.

In Buttons > Color, the black color selection means that the default color settings are in use for the button background and text. In the preview function, the primary and highlight colors used in the environment are visible on the buttons. When colors are changed, the new colors are also visible in the preview.

Creating Reports Without Learning Data

In the Reports view, it is possible to search for course and user reports and save these searches as quick reports. Now, the user reports have the option to hide result data, i.e., remove all columns related to course statuses from the Display view if needed. Instead, various user information fields can be displayed, allowing for different types of user listings with additional information.

When the report search is saved, access to the user's detailed learning information can also be blocked in the saved report by selecting Hide results.

Save report

Change to Learning Path: Learner Receives Completion for the Path When All Required Courses Are Completed

Previously, a learner could receive completion for the learning path by completing only the last course on the path if they had gained membership to that course by some other means than the learning path. Now, we have changed the learning path so that the learner must complete all required courses on the path before they can receive completion for the path. If they have completed the last course through other means, they still need to complete all other courses on the path to receive completion for the path.

If a learner has previously completed the last course of the learning path or if they gain membership to a course through other means and complete the course before the other courses on the path, this course will appear as completed on the path.

For learners added to the learning path, Priima now always checks whether all required courses on the path have been completed, and only then does the learner receive the completion mark. It is important to note a few things regarding previous course completions:

- If the learning path has optional courses, it is sufficient that the learner has completed the course or courses according to the set of courses criteria.

- The validity of the course completion does not matter: both valid and expired completions are accepted in the path completions.

Other Improvements and Bug Fixes

- The Join Here function is now visible to administrators when a link to a remote meeting is added to the event block.

- The validity of the password link is now displayed. The link is valid for four hours.

- The learner sees the grade directly in the Follow-up block.

- Memberships of dynamic groups cannot be modified via the REST API in the future, only memberships of regular (manual) groups can be modified via the API.

- Trainers and administrators can now see all tests targeted to them by default in the Materials section.

Priima Support Services

Priima Help Center https://help.priimalms.com/en/ contains instructions from the perspectives of learners, course administrators, trainers, report followers, and environment administrators. Instructions are updated with each version update. Please contact us if you notice that any instructions need clarification or if any essential instructions are missing from the Help Center.

Priima Academy - learn about Priima in Priima https://my.priimalms.com/priimaakatemia. The Academy is a free value-added service for Saarni Learning's customers. Priima Academy's course offerings include learning content, for example, for environment administrators, course administrators, and content creators. At the moment most of the content is in Finnish.

Priima Helpdesk assists trained Priima environment administrators via email on weekdays from Monday to Friday from 8 am to 4 pm EEST. You can reach the helpdesk at priima.helpdesk@saarnilearning.fi. Please note that you can also find the Helpdesk message button in Priima in the Administration > Statistics view.

Priima Customer Team supports with customer-related questions. You can reach the team by email info@saarnilearning.fi.
